

OUR ALMIGHTY ALL NATURAL SHEEP DRENCH

A proven mixture of natural organic ingredients that include but are not limited to naturally occurring Australian Seaweeds (kelp), various oils including rice bran, cloves, cinnamon, apple cider vinegar, aloe vera and many other minerals, herbs and other goodies. Rice bran oil is a naturally occurring source of antioxidants including tocopherols and gamma-oryzanol etc, a plant sterol that acts as a muscle builder and conditioner. It also contains high levels of squalene, a contributor to good foot health. Blended with these oils are our famous Adams apple cider vinegar, this aids digestion and absorption, promoting healthier wool; it also gives the drench its flavour and is high in potassium. In fact, our product contains over 80 different macro, micro and trace elements. All ingredients are GMO Free. Many are certified Organic in their own right. Because of this product high oil content, Mixing, Shaking and Stirring is required *before* each use.

Some separation of the product does naturally occur over time, this is perfectly normal.

AJ Products together with a hand full of international veterinarians have developed a **NATURAL ORGANIC** Almighty Sheep Drench which will boost the immune system in sheep, kill and ward off many of the common parasites and worms. Regular and continual use of our drench will result in your stock leaping and jumping like 3-year-old kids in a playground, you'll have to increase the height of your fences just to keep them in.

For Best Results We Strongly Advice:

LOW dose rates on a **REGULAR** bases gives far better results than **HEAVY** dose rates less often. Although we have customers using our drench just once a year, we recommend at least four times yearly and better still monthly or anything in between is fine. If you wish to continue to use commercial drenches, please use ours **FIRST**. Drench all sheep up to a **MAX** of 60ml for large adult sheep, 30ml normal size and 15ml for lambs. Best time to drench, 4 weeks prior to sales and shows. Immediately when joining and prior to lambing, all sick animals in poor condition will benefit from this mixture. Please note, drenching does not replace a good balanced normal diet. If you decide to administer the drench by adding it to the feed, molasses may be required initially to increase the acceptance of the drench. Our natural organic drench is successful against most common Australian worms and parasites, results will vary due to animal overall health, weight and environmental conditions. Please persevere and be patient, best results are often not seen for 12 months. This product contains no artificial colouring, fillers or preservatives, other than natural occurring ones. It is non toxic, non corrosive all natural and organic. Nil withholding period. Suitable for all farm animals, Proudly Australian made and owned.

Other benefits

1. Overall boost in general health and condition of sheep
2. Better utilisation of dry feed
